

# ASSIGNMENT-1

Mukunda Reddy AI21BTECH11021

## QUESTION 3(C)

In the figure given below, ABCD is a rectangle.  $AB = 14\text{cm}$  and  $BC = 7\text{cm}$ . From the rectangle, a quarter circle BFEC and a semicircle DGE are removed. Calculate the area of the remaining piece of the rectangle? (Take  $\pi = 22/7$ )

## SOLUTION

Shape	Rectangle	semi circle	Quarter circle
Area	$l \times b$	$\frac{1}{2}\pi r^2$	$\frac{1}{4}\pi r^2$

Areas of various shapes

$$\begin{aligned} \text{area of rectangle } ABCD &= l \times b \\ &= 14\text{cm} \times 7\text{cm} \\ &= 98\text{cm}^2. \end{aligned} \quad (1)$$

since  $BC$  and  $EC$  are the radius of same circle

$$\begin{aligned} \Rightarrow \overline{BC} &= \overline{EC} \\ &= 7\text{cm}. \end{aligned} \quad (2)$$

since  $AB$  and  $DC$  are the radius of same circle

$$\begin{aligned} \Rightarrow \overline{AB} &= \overline{DC} \\ &= 14\text{cm}. \end{aligned} \quad (3)$$

$$\begin{aligned} \text{Also } \overline{DE} &= \overline{DC} - \overline{EC} \\ &= 7\text{cm}. \end{aligned} \quad (4)$$

The radius of semicircle  $\widehat{GDE}$  given by

$$\frac{\overline{DE}}{2} = \frac{7}{2}\text{cm}. \quad (5)$$

$$\begin{aligned} \text{Area of } \widehat{BFEC} \text{ region} &= \frac{1}{4} \times \pi \times (r)^2 \\ &= \frac{1}{4} \times \pi \times 7\text{cm} \times 7\text{cm} \\ &= \frac{77}{2}\text{cm}^2. (\text{radius is } BC) \end{aligned} \quad (6)$$

$$\begin{aligned} \text{Area of } \widehat{GDE} \text{ region} &= \frac{1}{2} \times \pi \times (r)^2 \\ &= \frac{1}{2} \times \pi \times \frac{7}{2}\text{cm} \times \frac{7}{2}\text{cm}. \\ &= \frac{77}{4}\text{cm}^2. \end{aligned} \quad (7)$$

To get the area of the remaining part take total area of rectangle and subtract the areas of semicircle and quarter circle.

Required area =  $14\text{cm} \times 7\text{cm}$

$$- \frac{1}{2} \times \pi \times (7\text{cm})^2 - \frac{1}{4} \times \pi \times \left(\frac{7}{2}\right)^2$$

Fig. 1: python graph

### Verification in python

```
area of the requires region = area of rectangle
                             - area of semcircle-area of quatercircle
required area = 98-19.24225500323748-38.48451000647496
               = 40.27323499028755
```

Fig. 2: python code

$$\begin{aligned}
 \Rightarrow \text{arearequired} &= 98\text{cm}^2 - \frac{77}{2}\text{cm}^2 - \frac{77}{4}\text{cm}^2 \\
 &= \frac{161}{4}\text{cm}^2 \\
 &= 40.25\text{cm}^2 \quad (8)
 \end{aligned}$$

$\therefore$  Required Area =  $40.25\text{cm}^2$
